

Octagos Health is a digital health company that uses cutting edge remote monitoring software and a dedicated patient engagement team to provide best-in-class service to both physicians and patients.

OCTAGOSHealth

When should you call Octagos?

- 1) If you need help connecting or troubleshooting your home monitor
- 2) If you are a patient with an implanted cardiac device that needs to ensure you are setup with remote monitoring
- 3) A per your physician's request

What is Octagos and how do we assist your physician?

We partner with physician practices nationwide to assist with the remote monitoring of your cardiac device.

Through remote monitoring, we communicate with your physician between in person visits.

Our platform receives device alerts and remote transmissions. The Octagos team helps monitor your status, allowing your physician to better attend to alert notifications and any potential arrhythmia or device issues.

OCTAGOSHealth

We specialize in remote cardiac device monitoring. We work closely with your physician to improve the overall patient experience.

Who do I call with any questions?

You may contact Octagos at 281-769-8733.

One of our specialists will be happy to answer your questions 8:00 AM. to 7:00 PM. (CST). If it is an emergency, please always call 911 and, if possible, your physician's office.

Frequently Asked Questions

How does Octagos assist with the remote monitoring of your device?

Our platform helps your physician quickly and easily access your remote device alerts and history. Remote transmissions reports are scheduled every 1 or 3 months depending on your device. Remote monitoring is highly recommend by major medical societies

such as the Heart Rhythm Society. It can be done anytime and anywhere, improving your quality of life and decreasing the risk of missing a cardiac event.

Is the data secure?

Your data is transmitted to our platform, which is a safe and secure web-based data management system. We use industry leading security protocols. Your data is protected and confidential, where

only authorized users can access it.

How does Octagos work with my physician?

Octagos works closely with medical practices to provide the infrastructure and support necessary for physicians and other healthcare professionals to efficiently and effectively manage the continuous flow of data. We ensure that physicians are receiving the information they need to best manage your care.

Why do I need to do remote monitoring and who can I reach if I have any questions?

Remote monitoring keeps track of your cardiac device information on a daily basis, allowing for scheduled and alert transmissions (even when you are asleep). You may contact your physician's office or the Octagos Team at 281-769-8733 if you have any questions related to the remote monitoring of your cardiac device.

Should I expect to feel something when my scheduled transmission is taking place? Is it safe?

No, you will not feel anything during a scheduled transmission. The transmission is done when you are near or within range of the monitor, mostly during the night time while you are asleep. Yes, it is safe and effective. Remote monitoring is highly recommended by leading physician

societies based on the overwhelming data supporting its use.

Does insurance cover remote monitoring of cardiac devices?

Yes, in most cases your insurance will cover remote monitoring. As with any other medical care, you may still be liable for a copay or out-of-pocket payment based on your insurance plan. Please call your physician's office directly should you have any billing or insurance questions.

If I have symptoms or a problem with my medications, who do I call?

Octagos does not replace your physician. You should continue to visit your doctor and follow their care plan. Octagos should be contacted for questions related to the remote monitoring of your device, such as needing assistance setting up your monitor or confirming you are connected.
